

Key Messages for Patients and Public

Joint Task Force: Advocacy Resources
for Physician and Albertans

All Albertans should have a voice in what our health care system looks like.

- Decisions can't be made arbitrarily and in isolation. Health care providers and Albertans need to be involved.
- Government is making changes voters never agreed to and were never asked about.

Albertans are already stressed because of COVID and economic uncertainty. Accessing health care shouldn't be stressful too.

- Albertans deserve answers and certainty on what their health care will look like for them and their families.
- People don't realize what's at risk and may not realize it until it's too late. If patients have questions or concerns, doctors are here to help.

It's not about wanting more money.

- It's about wanting to protect the stability of our publicly funded health care system and the health of Albertans.
- We've offered to reduce what we get paid. Government ignored us.
