

Alberta Screening and Prevention (ASaP)

Purpose:

To assist primary care clinics in adopting a suite of evidence-based screening maneuvers for their patient panels

Outcome Measure:

The number of patients with documented screen completion for selected group of maneuvers, within recommended interval

Aim Statement:

By X date X clinic team will have improved screening rates by X%

Balancing Measure:

Patient cycle time

Prerequisite Change Packages

- Panel Processes Change Package

Search our collection of premium tools in [AMA's Resource Centre](#).

High Impact Changes

1. Improve the patient experience

2. Identify paneled patients for care improvements

3. Optimize screening processes

Potentially Better Practices (PBPs)

1.1 Establish a multidisciplinary improvement team and consider including a patient with lived experience

2.1 Generate patient lists for screening

3.1 Test and implement a process for opportunistic screening that bundles offers of screening

3.2 Test and implement a process for outreach screening that bundles offers of screening

3.3 Offer patient screening

3.4 Annually review HQCA report to identify quality improvement opportunities

Process Measures

Regularly scheduled team meetings

The number of patients due for each ASaP Screening Maneuver

Documentation of screening processes

Documentation of screening processes

Number of patients screened for selected maneuvers in a defined timeframe

Process is documented for reviewing screening
